The reply was filed after a final rejection, but prior to or on the same day as filing a Notice of Appeal. To avoid abandonment of this application, applicant must timely file one of the following replies: (1) an amendment, affidavit, or other evidence, which places the application in condition for allowance; (2) a Notice of Appeal (with appeal fee) in compliance with 37 CFR 41.31; or (3) a Request for Continued Examination (RCE) in compliance with 37 CFR 1.114. The reply must be filed within one of the following time periods:					
The period for reply expires 3 months from the mailing date of the final rejection.  The period for reply expires on: (1) the mailing date of this Advisory Action, or (2) the date set forth in the final rejection, whichever is later. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of the final rejection.  Examiner Note: If box 1 is checked, check either box (a) or (b). #### **DETAILED ACTION**

The Office Action is in response to After-Final amendment filed July 18, 2007. Claims 1-3, 5-19, 21-27, 54-59 are presented for further examination.

## Response to Arguments

# The Office notes the following argument(s):

- (a) Lachman I (US Provisional 60/272,712) does not prevent further transmission of packets until Lachman determines whether the packet sniffing assessment of a possible threat is accurate.
- 1. Applicant's arguments filed have been fully considered but they are not persuasive.

### In response to:

(a) The provisional application (Lachman I, 60/272,712) for which Lachman II (US Patent Application Publication 2002/0166063 A1) claims benefit discloses subject matter which is described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application (US Patent Publication 2002/0166063 A1) was filed, had possession of the claimed invention. Therefore, Lachman II can be used as prior art against the instant application.

Particularly Lachman I discloses performing a series of pattern matching operation on each incoming packets. The pattern matching operations is used to compare known or learned attack patterns to data. Once an attack is recognized from the pattern

matching, a countermeasure will be placed in the router blocking all traffic to and from the attacking network. The pattern matching is used to detect an attack. The attack is recognized based on the pattern matching technique (see pages 5-8 of Provisional Application, 60/272,712).

Therefore, Lachman I indeed teaches "the DED is operable to prevent further transmission of the one or more data packets based on the content match information" as claimed.
